

## **MX.40xx - 14 bit PXI transient recorder**

- **PXI 3U / CompactPCI 3U format**
- **Fastest 14 bit A/D converter board**
- **Models with 20 MS/s or 50 MS/s**
- **1 or 2 channels acquisition**
- **Simultaneous sampling on all channels**
- **6 input ranges:  $\pm 200$  mV up to  $\pm 10$  V**
- **Up to 64 MSample memory**
- **FIFO mode**
- **Window and pulsewidth trigger**
- **Input offset up to  $\pm 200\%$**
- **Software SBench for Windows included**
- **Software SBench for Linux included**

## **Product range overview**

Model	1 channel	2 channels	4 channels
MX.4020	20 MS/s		
MX.4021	20 MS/s	20 MS/s	
MX.4030	50 MS/s		
MX.4031	50 MS/s	50 MS/s	

## **Software/Drivers**

A large number of drivers and examples are delivered with the board:

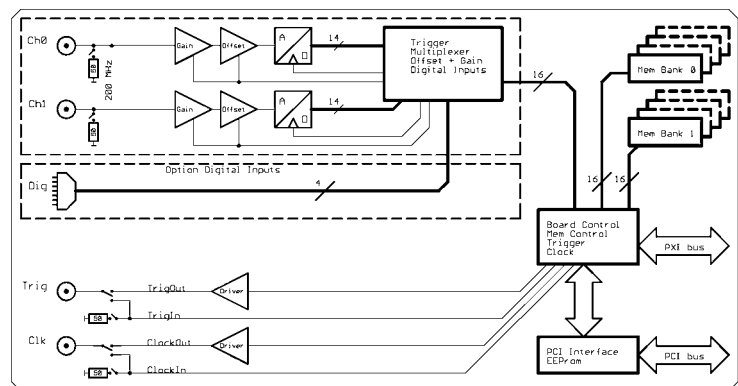

- Windows NT/2000 32 bit drivers
- Windows XP/Vista/7/8/10, 32 and 64 bit driver
- Linux 32bit and 64bit drivers
- SBench 6.x Base version for Windows and Linux
- Visual C++/Borland C++ Builder examples
- Borland Delphi examples
- Microsoft Visual Basic & Excel examples
- Python examples
- LabWindows/CVI examples
- LabVIEW - drivers and examples
- MATLAB - drivers and examples
- Other 3rd party drivers (e.g. VEE, DASyLab) are partly available upon request

## **General Information**

The MX.40xx is best suitable for applications that need high sampling rates as well as a maximum signal dynamic. These boards offer a resolution 4 times higher than 12 bit boards. On the MX.40xx every channel has its own amplifier and A/D converter. Each input channel can be adapted to a wide variety of signal sources. This is done by software selecting a matching input range, an input impedance and an individual input offset. The user will find easily a matching solution from the six offered models. These versions are working with sampling rates of 20 MS/s or 50 MS/s and have one or two channels and can also be updated to a multi-channel system using the internal synchronization bus. Data is written in the internal 8 MSamples up to 64 MSample large memory. This memory can also be used as a FIFO buffer. In

FIFO mode data can be transferred on-line directly into the PC RAM or to hard disk.

## **Hardware block diagram**

## **Software programmable parameters**

sampling rate	1 kS/s to max sampling rate, external clock, ref clock, PXI clock
Input Range	$\pm 200$ mV, $\pm 500$ mV, $\pm 1$ V, $\pm 2$ V, $\pm 5$ V, $\pm 10$ V
Input impedance	50 Ohm / 1 MOhm
Input Offset	$\pm 200\%$ in steps of 1%
Clock mode	internal PLL, internal quartz, external, external divided, external reference clock, PXI reference clock
Clock impedance	50 Ohm / high impedance ( $> 4$ kOhm)
Trigger impedance	50 Ohm / high impedance ( $> 4$ kOhm)
Trigger mode	Channel, External, Software, Auto, Windows, Pulse, PXI Line[5..0], PXI Startrigger
Trigger level	1/1024 to 1023/1024 of input range (10 bit)
Trigger edge	rising edge, falling edge or both edges
Trigger pulsewidth	1 to 255 samples in steps of 1 sample
Memory depth	32 up to installed memory in steps of 32
Posttrigger	32 up to 128 M in steps of 32
Multiple Recording segmentsize	32 up to installed memory / 2 in steps of 32

## Possibilities and options

### PXI bus

The PXI bus (PCI eXtension for instrumentation) offers a variety of additional normed possibilities for synchronising different components in one system. It is possible to connect several Spectrum cards with each other as well as to connect a Spectrum card with cards of other manufacturers.

### PXI reference clock

The card is able to use the 10 MHz reference clock that is supplied by the PXI system. Enabled by software the PXI reference clock is feeded in the on-board PLL. This feature allows the cards to run with a fixed phase relation.

### PXI trigger

The Spectrum cards support star trigger as well as the PXI trigger bus. using a simple software command one or more trigger lines can be used as trigger source. This feature allows the easy setup of OR connected triggers from different cards.

### Input impedance

All inputs could individually be switched by software between 50 Ohm and 1 MOhm input impedance. If using fast signals and high sampling rates or have 50 Ohm cable impedance the use of the 50 Ohm termination is recommended to minimise noise and signal reflections. If using weak signal sources or standard probes the use of the 1 MOhm termination is helpful.

### Ring buffer mode

The ring buffer mode is the standard mode of all oscilloscope instruments. Digitized data is continuously written into a ring memory until a

trigger event is detected. After the trigger, post-trigger samples are recorded and pre-trigger samples can also be stored. The number of pre-trigger samples available simply equals the total ring memory size minus the number of post trigger samples.

### FIFO mode

The FIFO mode is designed for continuous data transfer between measurement board and PC memory (up to 100 MB /s) or hard disk (up to 50 MB/s). The control of the data stream is done automatically by the driver on interrupt request.

### Channel trigger

The data acquisition boards offer a wide variety of trigger modes. Besides the standard signal checking for level and edge as known from oscilloscopes it's also possible to define a window trigger. All trigger modes can be combined with the pulsewidth trigger. This makes it possible to trigger on signal errors like too long or too short pulses.

### External trigger I/O

All instruments can be triggered using an external TTL signal. It's possible to use positive or negative edge also in combination with a programmable pulse width. An internally recognised trigger event can - when activated by software - be routed to the trigger connector to start external instruments.

### Pulse width

Defines the minimum or maximum width that a trigger pulse must have to generate a trigger event. Pulse width can be combined with channel trigger, pattern trigger and external trigger.

### Multiple Recording

The Multiple Recording mode allows the recording of several trigger events without re-starting the hardware. With this option very fast repetition rates can be achieved. The on-board memory is divided in several segments of same size. Each of them is filled with data if a trigger event occurs.

### Gated Sampling

programmed level.

The Gated Sampling mode allows data recording controlled by an external gate signal. Data is only recorded if the gate signal has a pro-

### External clock I/O

Using a dedicated connector a sampling clock can be fed in from an external system. It's also possible to output the internally used sampling clock to synchronise external equipment to this clock.

### Reference clock

The option to use a precise external reference clock (typically 10 MHz) is necessary to synchronize the instrument for high-quality measurements with external equipment (like a signal source). It's also possible to enhance the stability of the sampling clock in this way. The driver automatically generates the requested sampling clock from the fed in reference clock.

The option to use a precise external reference clock (typically 10 MHz) is necessary to synchronize the instrument for high-quality

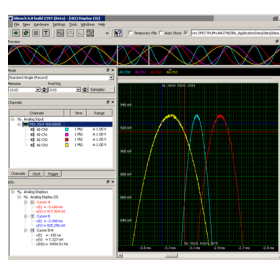

### Digital inputs

additional digital inputs for every analog A/D channel.

This option acquires additional synchronous digital channels phase-stable with the analog data. When the option is installed there are 2

### SBench 6

A base license of SBench 6, the easy-to-use graphical operating software for Spectrum cards, is included in the delivery. The base license makes it possible to test the card, display acquired data and make some basic measurements. It's a valuable tool for checking the card's performance and assisting with the unit's initial setup. The cards also come with a demo license for the SBench 6 professional version. This license gives the user the opportunity to test the additional features of the professional version with their hardware. The professional version contains several advanced measurement functions, such as FFTs and X/Y display, import and export utilities as well as support for all acquisition modes including data streaming. Data streaming allows the cards to continuously acquire data and transfer it directly to the PC RAM or hard disk. SBench 6 has been optimized to handle data files of several GBytes. SBench 6 runs under Windows as well as Linux (KDE, GNOME and Unity) operating systems. A test version of SBench 6 can be downloaded directly over the internet and can run the professional version in a simulation mode without any hardware installed. Existing customers can also request a demo license for the professional version from Spectrum. More details on SBench 6 can be found in the SBench 6 data sheet.

A base license of SBench 6, the easy-to-use graphical operating software for Spectrum cards, is included in the delivery. ## Technical Data

Resolution	14 bit	Dimension	160 mm x 233 mm (Standrad 6U)
Differential linearity error	± 0.5 LSB typ. (ADC)	Width (Standard)	1 slot
Integral linearity error	± 1 LSB typ (ADC)	Width (with digital inputs)	2 slots
Multi: Trigger to 1st sample delay	fixed	Width (with star hub option)	2 slots
Multi: Recovery time	< 20 samples	Analogue Connector	3 mm SMB male
ext. Trigger accuracy	1 Sample	Digital Connector	40 pol half pitch (Hirose FX2 series)
int. Trigger accuracy	1 Sample	Digital Inputs delay to analog sample	-6 samples
Ext. clock: delay to internal clock	42 ns ± 2 ns	Overvoltage protection (range ≤ ±1 V)	±5 V
input signal with 50 ohm termination	max 5 V rms	Overvoltage protection (range > ±1 V)	±50 V
Trigger output delay	1 Sample	Warm up time	10 minutes
Input impedance	50 Ohm / 1 MOhm    25 pF	Operating temperature	0°C to 50°C
Crosstalk 1 MHz sine signal 50 Ohm	< -80 dB	Storage temperature	-10°C to 70°C
Crosstalk 1 MHz sine signal 1 MOhm	< -65 dB	Humidity	10% to 90%
		MTBF	200000 hours
Min internal clock	1 kS/s	Zero offset error	adjustable by user
Min external clock	500 kS/s	Gain error	< 1 % of current value
		Power consumption 3.3 V @ full speed	max. 1.05 A (3.5 Watt)
		Power consumption 5 V @ full speed	max. 1.06 A (5.3 Watt)
Trigger input:Standard TTL level	Low: -0.5 V > level < 0.8 V High: 2.0 V > level < 5.5 V Trigger pulse must be valid ≥ 2 clock periods.	Clock input: Standard TTL level	Low: -0.5 V > level < 0.8 V High: 2.0 V > level < 5.5 V Rising edge. Duty cycle: 50% ± 5%
Trigger output	Standard TTL, capable of driving 50 Ohm. Low < 0.4 V (@ 20 mA, max 64 mA) High > 2.4 V (@ -20 mA, max -48 mA) One positive edge after the first internal trigger	Clock output	Standard TTL, capable of driving 50 Ohm Low < 0.4 V (@ 20 mA, max 64 mA) High > 2.4 V (@ -20 mA, max -48 mA)

	MX.4020 MX.4021	MX.4030 MX.4031
max internal clock	20 MS/s	50 MS/s
max external clock	20 MS/s	50 MS/s
-3 dB bandwidth	> 10 MHz	> 25 MHz
Zero noise level at 50 Ohm	< 2.1 LSB rms	< 2.9 LSB rms

## Dynamic Parameters

	MX.4020 MX.4021	MX.4030 MX.4031
Test - Samplerate	20 MS/s	50 MS/s
Testsignal frequency	1 MHz	1 MHz
SNR (typ)	> 69.7 dB	> 66.9 dB
THD (typ)	< -71.5 dB	< -70.8 dB
SFDR (typ), incl harm.	> 79.8 dB	> 73.8 dB
SINAD (typ)	> 67.5 dB	> 65.4 dB
ENOB (based on SINAD)	> 10.9	> 10.6

Dynamic parameters are measured at ± 1 V input range (if no other range is stated) and 50 Ohm termination with the samplerate specified in the table. Measured parameters are averaged 20 times to get typical values. Test signal is a pure sine wave of the specified frequency with > 99% amplitude. SNR and RMS noise parameters may differ depending on the quality of the used PC. SNR = Signal to Noise Ratio, THD = Total Harmonic Distortion, SFDR = Spurious Free Dynamic Range, SINAD = Signal Noise and Distortion, ENOB = Effective Number of Bits. For a detailed description please see application note 002.

## Order Informations

The card is delivered with 32 MSample on-board memory and supports standard mode (Scope) and FIFO mode (streaming). Operating system drivers for Windows/Linux 32 bit and 64 bit, examples for C/C++, LabVIEW (Windows), MATLAB (Windows), LabWindows/CVI, Delphi, Visual Basic, Python and a Base license of the oscilloscope software SBench 6 are included. Drivers for other 3rd party products like VEE or DASYLab may be available on request.

**Adapter cables are not included. Please order separately!**

### Versions

Order no.	1 channel	2 channels
MX.4020	20 MS/s	
MX.4021	20 MS/s	20 MS/s
MX.4030	50 MS/s	
MX.4031	50 MS/s	50 MS/s

### Memory

Order no.	Option
MX.4xxx-64M	Memory upgrade to 64 MSample (128 MB) of total memory
MX.4xxx-up	Additional fee for later memory upgrade

### Options

Order no.	Option
MX.4xxx-dig	Additional synchronous digital inputs (2 per analog channel) including Cab-d40-idx-100

**Amplifiers**

Order no.	Bandwidth	Connection	Input Impedance	Coupling	Amplification
SPA.1841 <sup>(2)</sup>	2 GHz	SMA	50 Ohm	AC	x100 (40 dB)
SPA.1801 <sup>(2)</sup>	2 GHz	SMA	50 Ohm	AC	x10 (20 dB)
SPA.1601 <sup>(2)</sup>	500 MHz	BNC	50 Ohm	DC	x10 (20 dB)
SPA.1412 <sup>(2)</sup>	200 MHz	BNC	1 MOhm	AC/DC	x10/x100 (20/40 dB)
SPA.1411 <sup>(2)</sup>	200 MHz	BNC	50 Ohm	AC/DC	x10/x100 (20/40 dB)
SPA.1232 <sup>(2)</sup>	10 MHz	BNC	1 MOhm	AC/DC	x100/x1000 (40/60 dB)
SPA.1231 <sup>(2)</sup>	10 MHz	BNC	50 Ohm	AC/DC	x100/x1000 (40/60 dB)
Information	External Amplifiers with one channel, BNC/SMA female connections on input and output, manually adjustable offset, manually switchable settings. An external power supply for 100 to 240 VAC is included. Please be sure to order an adapter cable matching the amplifier connector type and matching the connector type for your A/D card input.				

**Cables**

for Connections	Length	Order no.				
		to BNC male	to BNC female	to SMA male	to SMA female	to SMB female
Analog/Clock/Trigger	80 cm	Cab-3f-9m-80	Cab-3f-9f-80	Cab-3f-3mA-80	Cab-3f-3fA-80	Cab-3f-3f-80
Analog/Clock/Trigger	200 cm	Cab-3f-9m-200	Cab-3f-9f-200	Cab-3f-3mA-200	Cab-3f-3fA-200	Cab-3f-3f-200
Probes (short)	5 cm		Cab-3f-9f-5			
		to 2x20 pole IDC	to 40 pole FX2			
Digital signals (option)	100 cm	Cab-d40-idc-100	Cab-d40-d40-100			

**Software SBench6**

Order no.	
SBench6	Base version included in delivery. Supports standard mode for one card.
SBench6-Pro	Professional version for one card: FIFO mode, export/import, calculation functions
SBench6-Multi	Option multiple cards: Needs SBench6-Pro. Handles multiple synchronized cards in one system.
Volume Licenses	Please ask Spectrum for details.

<sup>(1)</sup> : Just one of the options can be installed on a card at a time.

<sup>(2)</sup> : Third party product with warranty differing from our export conditions. No volume rebate possible.
